

Engineering Apprenticeship

Mars Chocolate UK

*Engineering: it's what YOU make it...
But we'll provide all the tools to build your future*

*We are looking for up to three apprentices for our 2018 intake
Year 1, Kingston College
Years 2-4 Slough
£14,930 in year 1, rising to £23,280 by year 4*

If you enjoy working with your hands; you have a passion for fixing things and you've got a strong interest in engineering, then this is an exciting career opportunity for you.

On an engineering apprenticeship with us, you'll earn real money from day one, while learning how to make our world-famous products and use our state-of-the-art machinery. Over the course of your apprenticeship, you'll get to take part in training courses and team-building events, as well as being given real responsibility. And at the end of your apprenticeship, you could find yourself in any number of different roles. One of our apprentices has gone on to manage the maintenance of Maltesers line and another now runs the entire apprenticeship scheme. Put simply, your future will be wide open.

To rise to the challenge, you'll need five good GCSEs, including Grade B/5 or above in Maths, plus English and a Science grade A-C or 4-9. A flexible approach and an interest in engineering are important and you'll also need to be a great team player and communicator, with the motivation to get results.

To apply, please follow the web link below. Applications must be completed by Midnight on Thursday 5th July at the very latest.
